

## GUNS, GLUES AND CLEANING PASTE :

We manufacture 2 different types of glues : available in diameters of 12mm, 15mm, 43mm

This glue is recommended for hot and humid environments. Its formula allows for quick crystallization and provides maximum pulling performance within a limited time range.

This glue is recommended for every environment. It crystallizes slowly, allowing for a wider range of time to complete the pulling. The properties of the glue at the different stages of crystallization within this extended time range mean that different results can be obtained according to the varying thickness and temperature of the glue.

The formula of our abrasive paste was developed for optimal cleaning of the glue tabs as well as the decontamination and thorough cleaning and polishing of the work area. We consider this step a must in order to conserve the glue tabs' gripping power over time.

MB-PAP PASTA CLEAN-OUT

## OUR SERVICES :

- DISTRIBUTION OF THE TOOLS AND SYSTEMS WE MANUFACTURE
- TAILORING OF KITS ACCORDING TO THE CUSTOMER'S NEEDS
- TRAINING AND ONLINE SUPPORT FOLLOWING PURCHASE
- ON-SITE TRAINING COURSES FOR PROPER USE OF OUR SYSTEM : Levels 1, 2, 3
- COURSES ON AUTO BODY FINISHING AND HAIL DENT REPAIR
- TRAINING COURSES ON MANAGEMENT AND ON THE TECHNIQUES AND PRACTICAL SKILLS INVOLVED IN EVERY PHASE OF AUTO BODY REPAIR

## GLUE PULLING REPAIR SYSTEM

The SpeedRepair Glue Pulling system was invented to speed up and improve upon existing body repair techniques. Deris Barbiero, skilled body shop mechanic with over 40 years of experience, came up with the idea in 2014.

After many years of research and trial and error dedicated to the development of the system, a variety of modular and progressive kits are available which can be adapted to any type of job (light, medium impact, high impact and very high impact)

WWW.SPEEDREPAIR.IT

**OUR KITS :**

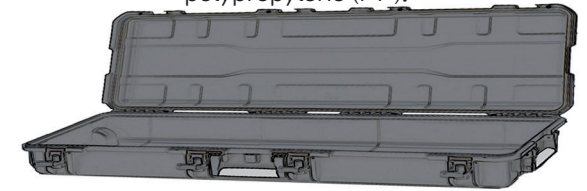

Speedrepair offers a variety of kits which are modular, progressive, and integrable according to the demands of the job.

It's an efficient repair system and in most cases the work can be done from the outside of the body shell.

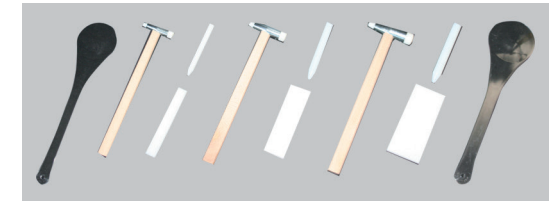

The pulling is done with a hot glue made of wax and natural resins.

Even a technician with little experience and basic skills can achieve optimal results.

Our basic SLIM, SLIM COMBINATION BOOST, BASIC or BASIC COMBINATION BOOST kits can be supplied within this trolley case made of polypropylene (PP).

We have sheet metal shaping hammers with interchangeable nylon tips, nylon wedges, nylon knockdowns and shaping palettes.

Our basic kit containing 5 levers of progressive sizes, each with corresponding handles, has specific technical characteristics for repairing scrapes, fixing edges and anything else necessary to carry out the body finishing work. Their rigidity gives the technician many advantages; high pressure can be applied and with our grooved handle one can insert the lever at different points and position it 6 different ways
